

5 WATT SMT SINGLE

Features

- SMT Technology
- 2:1 Input Range
- Efficiency up to 85%
- I/O Isolation 1500VDC
- Remote on/off Control
- Short Circuit Protection
- MTBF > 1,000,000 Hours
- RoHS Compliant
- MSL2 (Moisture Sensitivity Level per IPC/JEDEC J-STD-020D)

Selection Chart			
Model	Input Range		Output
		VDC	mA
12S3R3.1200SMT	9.0 - 18.0	3.3	1200
12S5.1000SMT	9.0 - 18.0	5	1000
12S12.417SMT	9.0 - 18.0	12	417
12S15.333SMT	9.0 - 18.0	15	333
24S3R3.1200SMT	18.0 - 36.0	3.3	1200
24S5.1000SMT	18.0 - 36.0	5	1000
24S12.417SMT	18.0 - 36.0	12	417
24S15.333SMT	18.0 - 36.0	15	333
48S3R3.1200SMT	36.0 - 75.0	3.3	1200
48S5.1000SMT	36.0 - 75.0	5	1000
48S12.417SMT	36.0 - 75.0	12	417
48S15.333SMT	36.0 - 75.0	15	333

Short Circuit Protection		Continuous				

Remote On/Off Control				
Parameter	Conditions	Min.	Max.	Unit
Supply On	2.5 to 5.5 VDC or Open Circuit			
Supply Off		-0.7	0.8	VDC
Device Standby Input Current		----	10.0	mA
Control Input Current (on)	$Vin = \text{Min. to Max.}$	—	-200	μA
Control Input Current (off)	$Vin = \text{Min. to Max.}$	----	-300	μA
Control Common	Referenced to Negative Input			

Notes:

- (1) All parameters measured at $T_c=+25^{\circ}\text{C}$, resistive load, nominal input voltage, full rated output current unless otherwise noted.
- (2) Transient recovery time is measured to within 1% error band for a step change in output load 75% to 100%.
- (3) The 5 Watt Single series has limitation of maximum connected capacitance at the output. The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time. For optimum performance we recommend 680 μF maximum capacitive load.
- (4) When measuring output ripple & noise, an external 0.1 μF ceramic capacitor is recommended to be placed from +Vout to -Vout.
- (5) When measuring peak-to-peak output noise, use a C_{out} 0.47 μF ceramic capacitor. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20MHz. Position the load between 50mm and 75mm from the DC/DC converter.
- (6) Specifications subject to change without notice
- (7) Water Washability - Calex DC/DC converters are designed to withstand most solder/wash processes. Careful attention should be used when assessing the applicability in your specific manufacturing process. Converters are not hermetically sealed.
- (8) RoHS Compliance means conformity to EU Directive 2002/95/EC of 27 January 2003, on the restriction of the use of certain hazardous substances in electrical and electronic equipment, lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls, and polybrominated diphenyl ethers are not present in quantities exceeding the following maximum concentrations in any homogeneous material, except for applicable exemptions. 0.1% (by weight of homogeneous material) lead, mercury, hexavalent chromium, polybrominated biphenyls, polybrominated diphenyl ethers, or 0.01% (by weight of homogeneous material) cadmium. The RoHS marking is as follows.

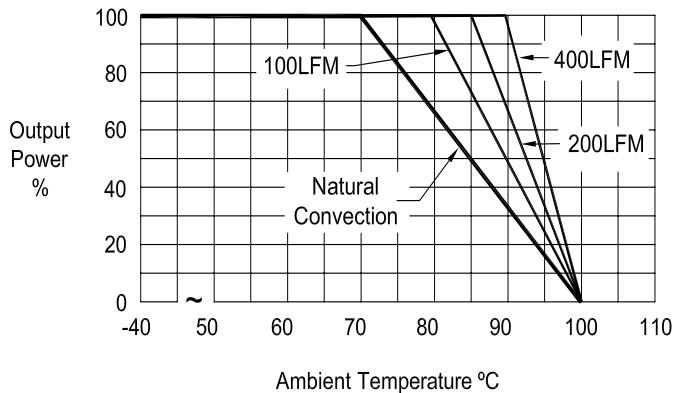

5 WATT SMT SINGLE

General Specifications

All Models		Units	
Isolation			
Isolation Voltage, 60 seconds	MIN	1500	VDC
Isolation Resistance, 500VDC	MIN	1000	Mohms
Isolation Capacitance, 100kHz, 1V	TYP MAX	650 750	pF
Environmental			
Operating Temperature Case	MIN MAX	-40 +90	°C
Storage Temperature	MIN MAX	-50 +125	°C
Humidity	MAX	95	%
MTBF MIL-HDBK-217F @25°C, Ground Benign	MIN	1000	K Hours
Cooling	Free-Air Convection		
General			
Case Size	1.31 x 0.81 x 0.40 inches 33.4 x 20.6 x 10.2 mm		
Case Material	Non Conductive Black Plastic		
Weight	14g		

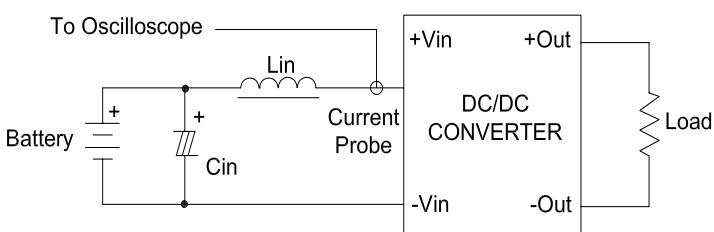

Derating Curve

Testing

Input reflected-ripple current is measured with a inductor Lin (4.7µH) and Cin (220µF, ESR < 1.0Ω at 100kHz) to simulate source impedance.

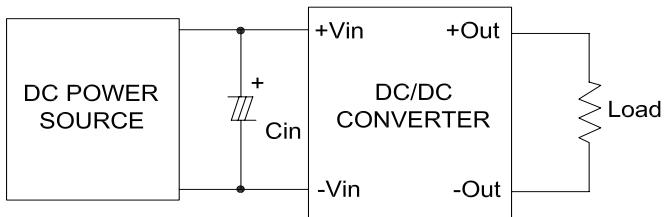

Capacitor Cin, offsets possible battery impedance. Current ripple is measured at the input terminals of the module, measurement bandwidth is 0-500kHz.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup.

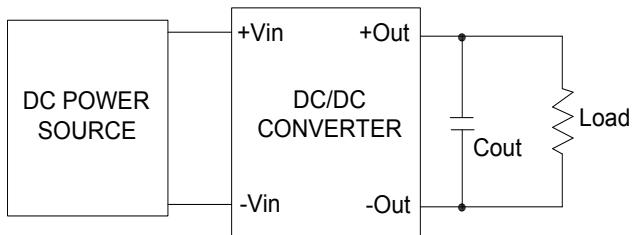

Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100kHz) capacitor of a 3.3µF for the 12V input devices and a 2.2µF for the 24V and 48V units.

Output Ripple Reduction

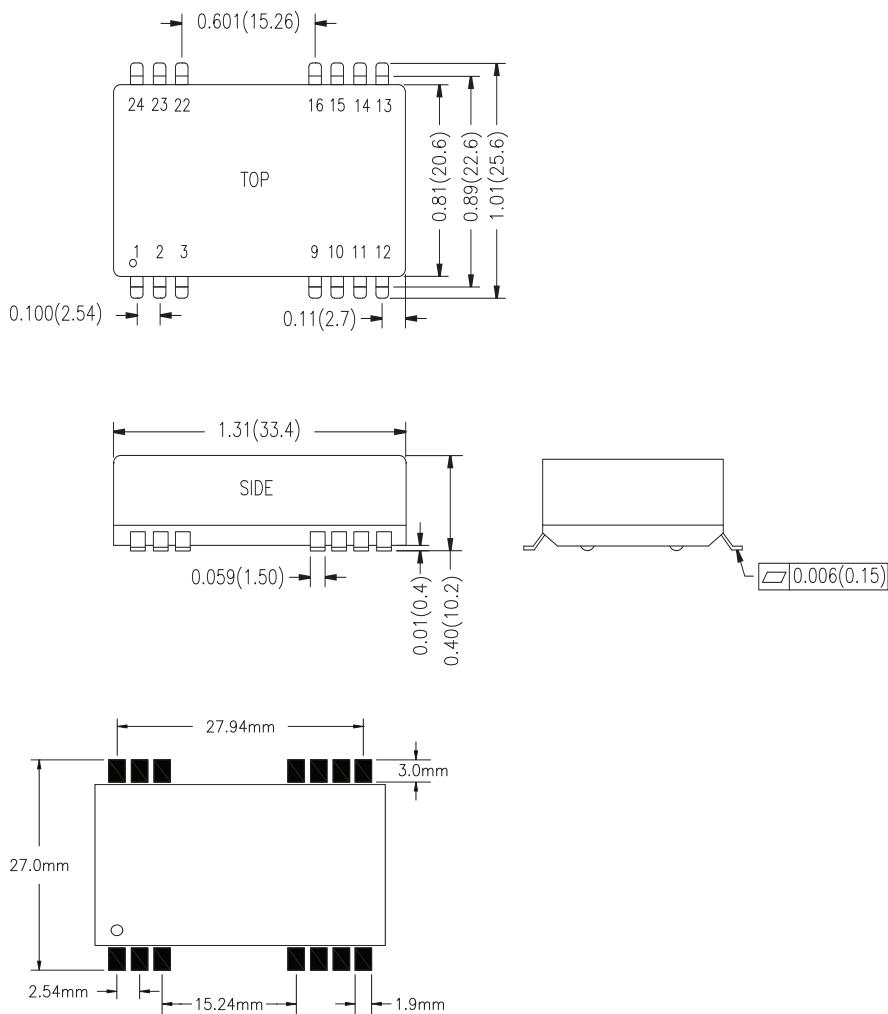

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance.

To reduce output ripple, it is recommended to use 3.3µF capacitors at the output.
