

5 Watt HW Single Series DC/DC Converters

Features

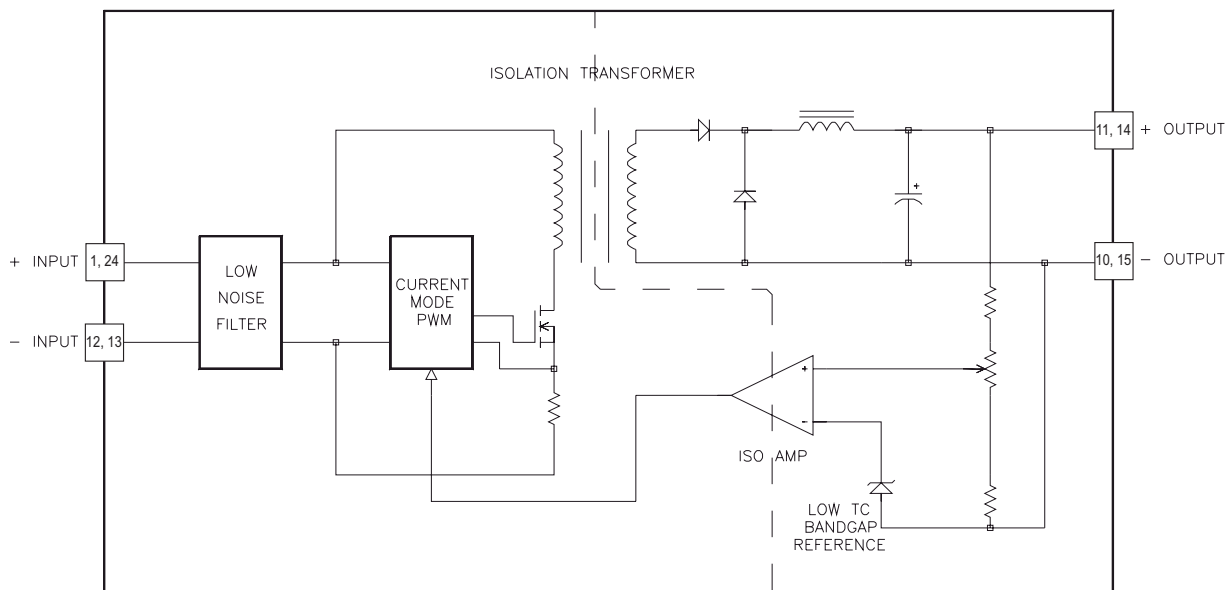

- Up to 5 Watts in 1.25" x 0.80" x 0.40" case
- Efficiencies to 84%
- Isolation Voltage up to 1544 VDC
- Water Washable Case Design
- Overcurrent Protection for Long, Reliable Operation
- Fully Self Contained,
No External Parts Required for Operation
- RoHS Compliant

Model	Input Range VDC		Output VDC	Output mA
	Min	Max		
12S1R5.1200HW	9	18	1.5	1200
12S1R8.1200HW	9	18	1.8	1200

48S15.350HW	36	72	15	350

Description

These 5 Watt DC/DC Converters were designed for fast integration with your systems power needs. With no external components or filtering necessary for all but the most critical applications, these converters can provide power instantly. This saves you costly engineering time required to design your system around the power converter.

5 Watt HW Single Series DC/DC Converters

General Specifications			
All Models			Units
Isolation			
Isolation Voltage			
Input to Output 12S, 24S	MIN	700	VDC
Input to Output 48S 10µA Leakage	MIN	1544	
Input to Output Capacitance	TYP	1500	pF
Environmental			
Case Operating Range	MIN	-40	°C
No Derating	MAX	90	
Case Functional Range (9)	MIN	-40	°C
	MAX	100	
Storage Range	MIN	-55	°C
	MAX	105	
Thermal Impedance (8)	TYP	30	°C/Watt
General			
Unit Weight	TYP	0.44	oz
Agency Approvals	UL 1950, CuL, EN60950 (TUV) pending		
MTBF	> 1 M Hours		

NOTES:

- All parameters measured at T_c=25°C, nominal input voltage and full rated load unless otherwise noted. Refer to the CALEX Application Notes for the definition of terms.
- Output Noise is measured with a 1µF tantalum capacitor and a 0.01µF ceramic capacitor across the output. The fundamental component of noise is at the switching frequency and also is commonly referred to as ripple.
- External fusing should be used for system protection due to a catastrophic failure. See CALEX Application Note 9 in the Calex DC/DC Catalog to determine correct fuse.
- Load Transient Overshoot is the output voltage peak amplitude referenced to the final value due to a step load change of 50-75% occurring only on the measured output. "Load Transient Overshoot" and "Dynamic Response" are the same specification. Load Transient Recovery Time is the time for the output to return to within specified voltage error band centered about the final value. "Load Transient Recovery Time" and "Transient Response" are the same specification.
- Temperature coefficient is defined for case temperatures. Output voltage deviation is calculated as the maximum resulting from either 1) 25°C case to maximum operating case temperature, or 2) 25°C case to minimum operating case temperature.
- Below the minimum rated load, the output may exhibit noise performance degradation. Operation with less than minimum rated load will not damage the unit, and the DC regulation is not significantly affected.
- The case thermal impedance is specified and the case temperature rise over ambient per package watt dissipated.
- Case functional temperature range is intended to give an additional data point for use in evaluating this power supply. At the low functional temperature the power supply will function with no side effects, however, sustained operation at the high functional temperature will reduce expected operational life. The data sheet specifications are not guaranteed over the functional temperature range.
- Specifications subject to change without notice.
- Water Washability - Calex DC/DC converters are designed to withstand most solder/wash processes. Careful attention should be used when assessing the applicability in your specific manufacturing process. Converters are not hermetically sealed.

(11) RoHS Compliant

RoHS Compliance means conformity to EU Directive 2002/95/EC of 27 January 2003, on the restriction of the use of certain hazardous substances in electrical and electronic equipment, lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls, and polybrominated diphenyl ethers are not present in quantities exceeding the following maximum concentrations in any homogeneous material, except for applicable exemptions. 0.1% (by weight of homogeneous material) lead, mercury, hexavalent chromium, polybrominated biphenyls, polybrominated diphenyl ethers, or 0.01% (by weight of homogeneous material) cadmium. The RoHS marking is as follows:

Mechanical Outline and Connector Pin Assignments

Mechanical tolerances unless otherwise noted:

X.XX dimensions: ±0.020 inches

X.XXX dimensions: ±0.010 inches

Pin location shown is for the mating PCB
